

What's New in Forecast Pro TRAC V8.2

Item Status Assignments

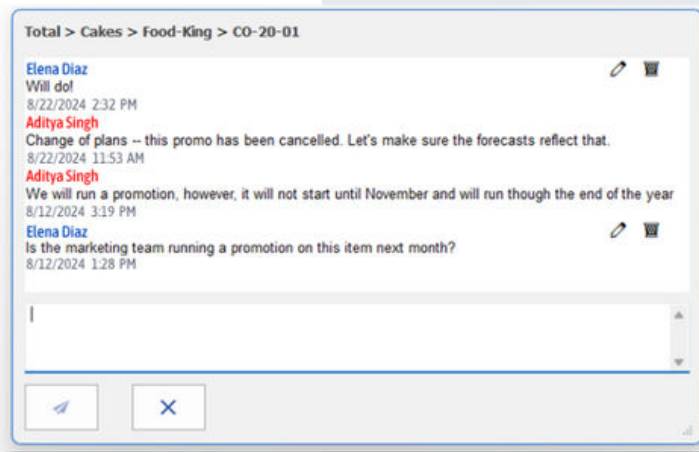

Forecast Pro TRAC V8.2 introduces a dynamic status field which makes it easy for users to streamline the forecast review process and assign a status to each item on the Navigator. The dynamic status field enables flexible reporting and filtering and enables users to manage status across multiple items directly from a report.

Status options are fully customizable and can be tailored to reflect specific forecasting processes.

Threaded Comments

Forecast Pro TRAC V8.2 offers item-level threaded comments, streamlining feedback and documentation across your team. With author tags and timestamps, you can easily track discussions, decisions, and updates to ensure a clear record of all communications.
